

Bluetooth car phone software manual

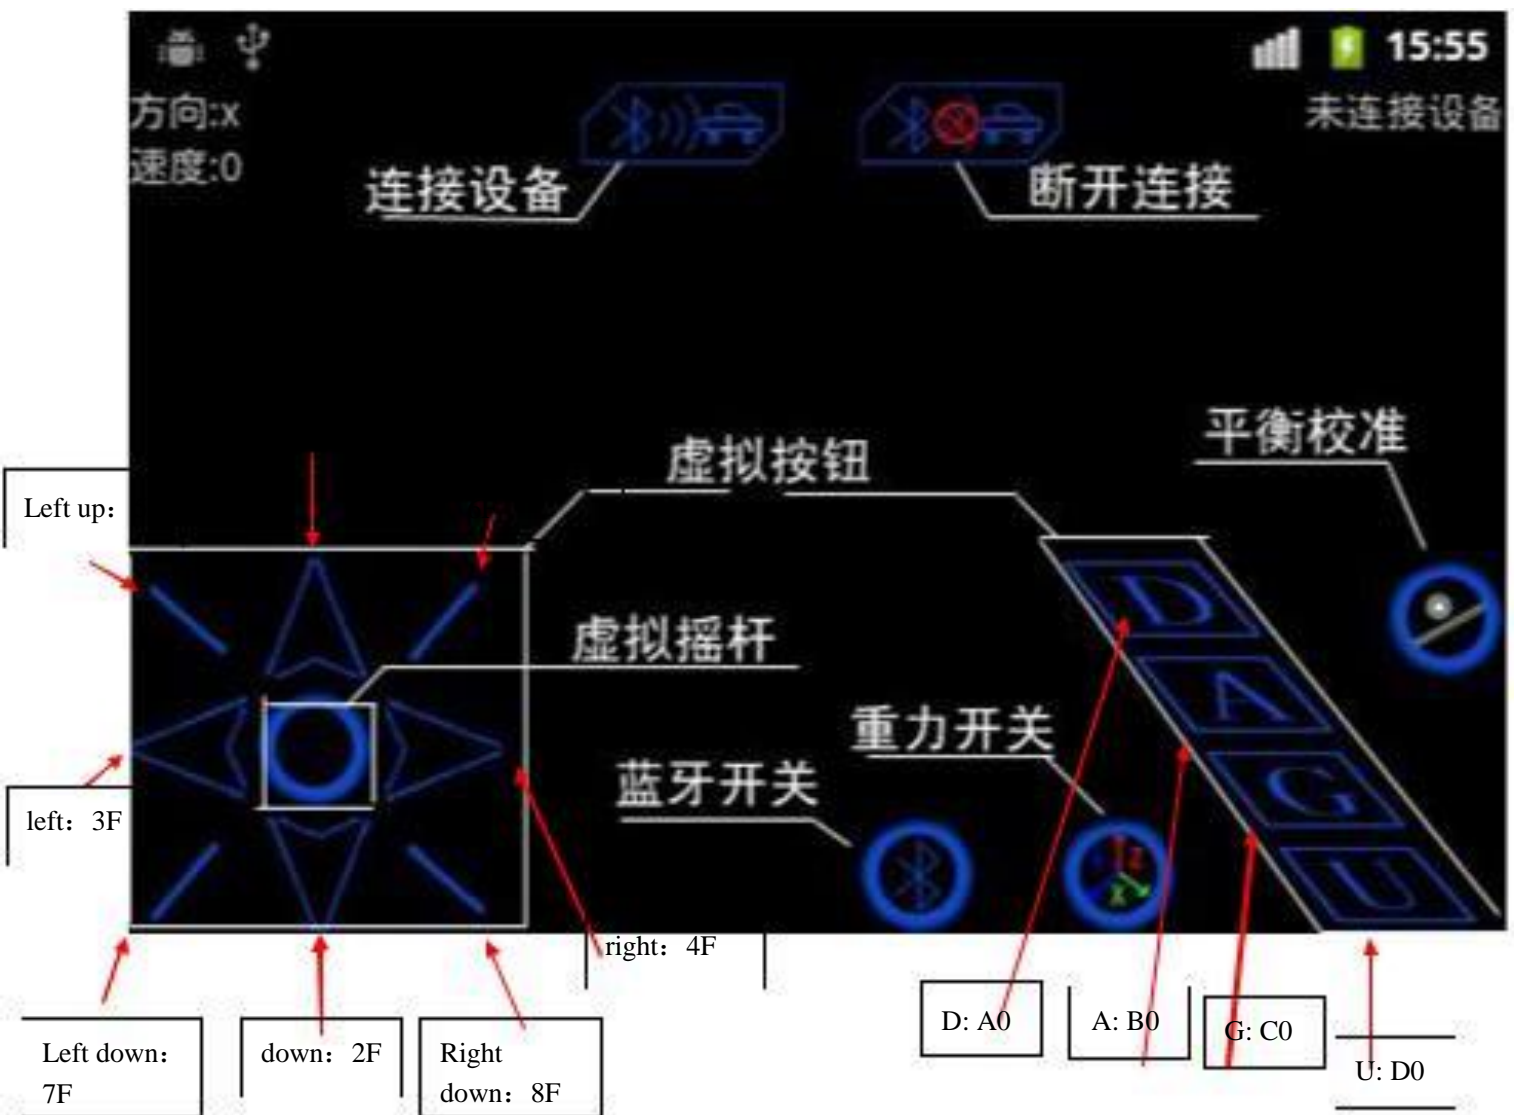

The first time to use the phone and Bluetooth car pairing, take a look at the following steps:

1. Remember to open the phone Bluetooth, open the software will remind the user to open the Bluetooth
2. Then, as shown in the text prompts, connect the Bluetooth device, the first pair of Bluetooth devices to scan, otherwise can not connect the car.
3. Match the car, the password is "0000" or "1234" try it.

Interested students can use the serial port assistant to test the Bluetooth module to receive the serial data sent by the phone.

This is all the virtual keys's sending code value, the user can properly expand their favorite features.

Note: the program supports up and down around the control car, D, A, G, U, key is not developed. Students can develop their own design.

In addition to support the gravity sensing control car forward, backward, turn left, turn right.

There are a lot of Gravity sensor datas, interested students can test their own! (we have no instructions for it.)
