

## PrimaCreator P120 Wi-Fi and mobile application for Android setup.

This application works with Android smart phones.

Download the mobile application for android from the link below:

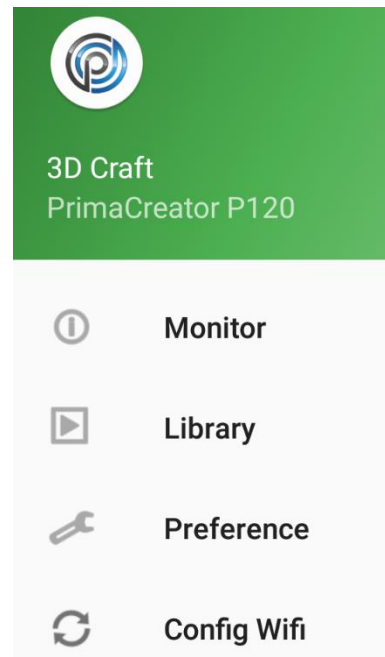

<https://drive.google.com/file/d/0BxVjjKHvPwU4bThicVdVLU1lakE/view?usp=sharing>

Install the application on your smart phone. The phone will warn you about that the application is from an unknown source. You need to allow the phone to install applications from an unknown source. You can choose to just allow it for this application.

Open the application and press “Config wifi” in the menu.

Fill in the password to your Wi-Fi.

When the application is connected to your Wi-Fi, turn on the printer. Navigate the “arrow “so that it is under “Move”. Push down the button. You will see the text “smart config started”. It can take up to one 1 minute for the config to be done.
