

Technical Parameters

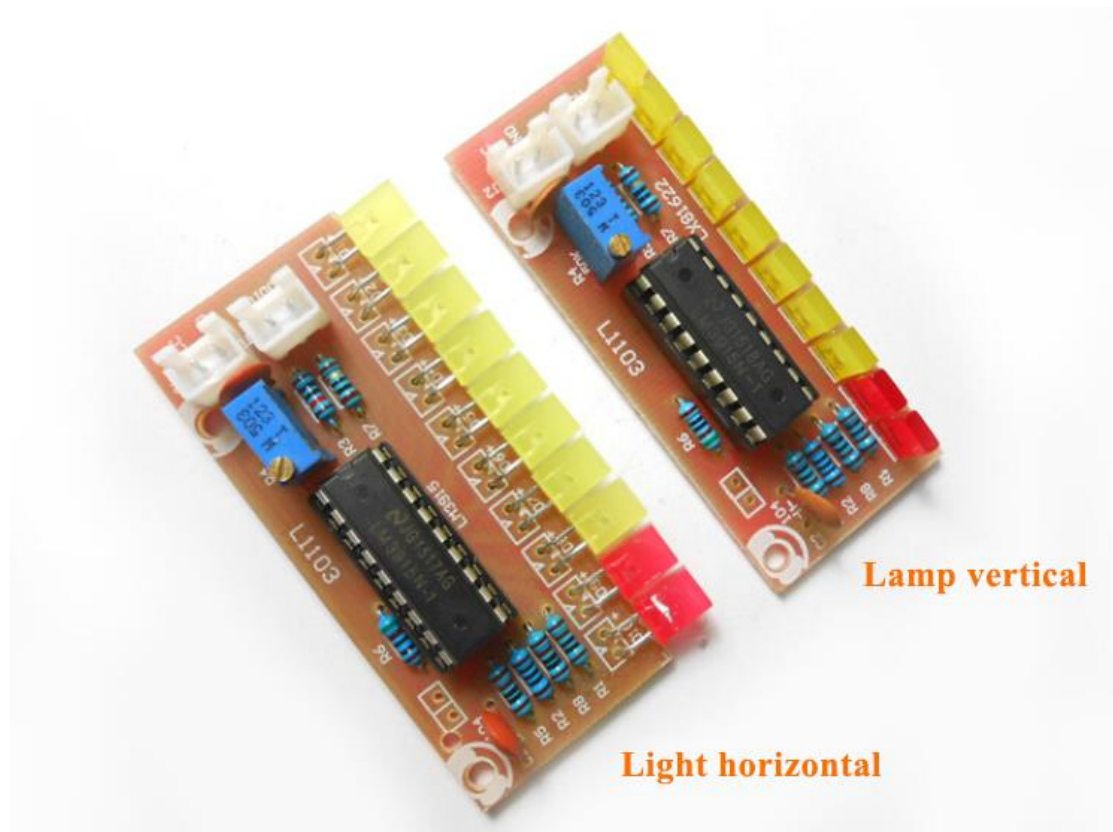

LM3915 10-point audio level indicator kit and finished board (send two cables)

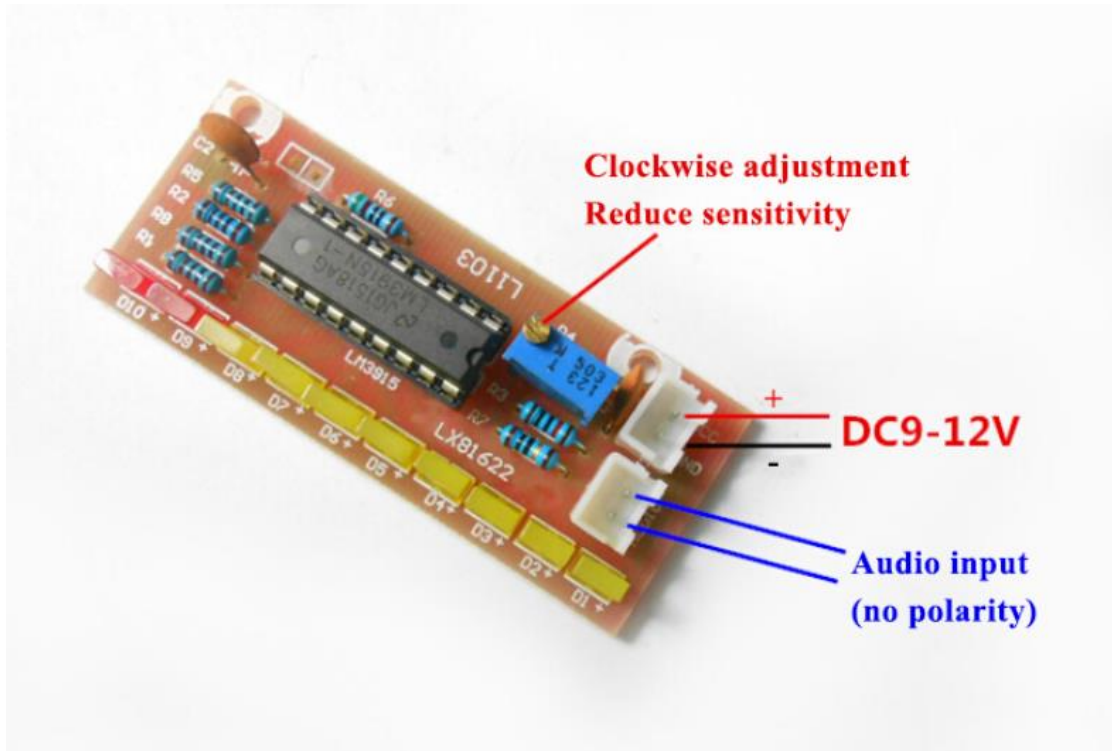

Supply voltage: DC9V--12V

PCB size: length 62mm * width 27mm

Two indication modes: strip indicator and fire point indication

LED lamp installation method: the lamp row provides two vertical and horizontal installation methods

Debugging notes

1. If the kit and the audio playback device share a 12V power supply, the audio signals are also polarity-connected.
2. In the case of not a public power supply, if the display cannot be performed normally, the polarity of the audio line can be reversed.
